Disaster Management is emerging globally as a full-fledged academic discipline and UGC NET has also introduced as a separate subject from 2024. As disaster management is an interdisciplinary subject, anyone can deep dive into this subject. The work profile of a disaster management professional ranges from planning for future risks, research on changing trends, risk assessments, training and capacity building, relief and rehabilitation, etc. The skills required varies in the environment where you are placed in. A social worker is trained to handle to ground realities, deliver results in complex and tough condition. An academicians focuses on research on natural phenomena and hazards using technologies and innovations. A risk analyst or advisor prepares a business continuity plans for the firms for the uninterrupted delivery of services and products. All works towards achieving resilient community, businesses, institutions and ultimately, the societies.

Target participants

The session will be open for students, academicians, researchers, professors and all the interested ones. As disaster management is transdisciplinary, individual from disaster/ emergency management, arts, science, engineering, environment studies, law can attend this workshop.

Expected Outcome

1. To provide knowledge about different career paths in disaster risk management
